

**NORTHLAND ANIMAL HOSPITAL
NOW OFFERS
ENHANCED MIXED-BREED ANALYSIS**

In February of 2008 *Northland Animal Hospital* was one of the first hospitals in the area to offer an analysis for those mixed-breed pet owners who were interested to learn the breed makeup of their companion pet. *Northland A.H.* is now pleased to announce the launch of *Wisdom Panel™ Professional*. This is an enhancement of the previous mixed-breed analysis *Wisdom Panel™ MX*.

Wisdom Panel™ Professional is a state-of-the-art genetics analysis that goes above and beyond breed detection for mixed-breed dogs. The ground-breaking enhancements that are part of this analysis are:

1) **Expanded breed detection.** Over 200 breeds, types and varieties. This represents a 27% increase in breed detection.

2) **Weight prediction functionality.** The analysis will predict a puppy's adult genetic weight range, which can help us develop an early nutrition and exercise program for your pet.

3) **Health risk pre-screening.** The analysis will check for a pet's breed-related risk of developing 16 different inherited health conditions. The analysis does not directly perform the diagnostic test for the conditions, but this new pre-screen feature will help us make more informed decisions about preventative care measures for a mixed-breed dog.

Wisdom Panel™ Professional will pre-screen for 14 different **Optigen™** diseases, Multi-Drug Resistance, and Exercise Induced Collapse Disorder.

We are pleased to offer these new enhancements at *NO ADDITIONAL COST!*

Additionally during the month of October we will offer this analysis for **\$150** – a savings of over **25%!**

Contact our office today and find out what makes up your mixed-breed dogs background!
